

# Children's Psychological Processes Scale

*Milton J. Dehn, Ed.D.*

## **Purpose of the CPPS**

The CPPS is designed to identify psychological processing deficits in children referred for a learning disability (LD) evaluation. The CPPS is also suitable for screening and progress monitoring.

## **Norming**

The CPPS was normed on a sample of 1,121 children rated by 278 teachers from 128 communities in 30 states. The sample's demographics closely match those of the U.S. population.

## **Reliability**

For the four normative age groups, the internal consistency reliability coefficients of the subscales range from .88 to .98, with the majority in the mid-90's.

## **Validity**

Validity support comes from high correlations with measures of processing skills, cognitive skills, and achievement, and from factor analytic and developmental evidence.

## **LD Profile and Classification Accuracy**

Compared to matched controls, subjects with LD had significantly higher means on all subscales. The CPPS has high classification accuracy in regards to LD.

## **Scoring and Reports**

Online scoring and reports come free with the purchase of rating forms. The reports include a brief narrative, a graph, a table of scores, change-sensitive *W*-scores, and a discrepancy table for determining intra-individual strengths and weaknesses.

## **Ages**

5 - 12

## **Number of Items**

121

## **Number of Subscales**

11

## **Format**

Teacher Rating Scale  
Online administration  
Online scoring  
Online report

## **Administration Time**

15 Minutes

## **Online Assessment Center**
